

Quiz 2 Review Guide

- 1. Default Constructors
 - When does the compiler provide a default constructor?
 - When does the compiler implicitly call the default constructor in a derived class?
- 2. Access modifiers
 - Difference between Public, Private, and Protected
- How are virtual functions used in polymorphism?
- Do you want to use pass by value or pass by reference for the parameter in a function that uses polymorphism? Why?
- If a derived class overrides a base class method, how can you call the base class method within a derived class method?
